

SAMBA Audio Processor

Your Life. Your Style. Your Hearing.

SAMBA's innovative design gives you the freedom of choice. With a quick snap and a click, you can attach one of the many interchangeable covers to the audio processor to reflect your mood: make an expressive statement by wearing one of the contemporary design covers* or choose a cover that matches your hair to keep your processor discreet.

For 30 years, MED-EL has consistently been the industry's leader in providing innovative hearing loss solutions. But our wide-ranging support services also set us apart from the rest.

MED-EL offers personalized, region-specific customer service and reimbursement representatives to provide clinics and recipients with around-the-clock support. Our Consumer Engagement Team is a group of hearing health professionals who organize local events and workshops for English and Spanish-speaking populations. Additionally, MED-EL's BRIDGE program offers a variety of rehabilitation resources, while the HearPeers online forum gives recipients a chance to share and connect with other hearing implant recipients and families.

Let us know if you have questions. We're here to support you during every step of your hearing journey.

INTELLIGENT HEARING SYSTEM

Who may benefit from BONEBRIDGE?

BONEBRIDGE is an option for individuals with conductive or mixed hearing loss, or single-sided deafness. Your candidacy will be determined by your hearing health professionals.*

BONEBRIDGE is an innovative bone conduction implant system consisting of the SAMBA audio processor worn behind the ear and the Bone Conduction Implant (BCI) 601, positioned invisibly under intact skin.

What can you look forward to with BONEBRIDGE?

DISCRETION: As the implant is invisible under intact skin, it complements your active lifestyle: it's safe and more hygienic than other bone conduction systems. Additionally, the SAMBA audio processor is slim and easy to hide under your hair or show off with a design cover.

COMFORT: SAMBA is held directly above the implant by means of gentle magnetic attraction. Weighing less than 9 grams, SAMBA is the lightest bone conduction audio processor available and can be worn comfortably throughout the day!

*BONEBRIDGE indications vary by country. BONEBRIDGE has been granted de novo clearance by FDA for candidates 12+ years in the USA. It is approved by Health Canada for candidates 5+ years in Canada.

SOUND QUALITY: Many other bone conduction systems *lose critical sound energy* by driving mechanical vibration from the audio processor across skin to the bone.

SAMBA is distinctly different: it is the first audio processor to do all the thinking and none of the vibrating! SAMBA transfers the signal wirelessly to the implant. The BCI 601 implant then converts the signal into mechanical vibration and efficiently sends it to the inner ear via bone conduction.

BONEBRIDGE redefines what life is like with a bone conduction implant.
